

The relationship between lysophosphatidic acid receptor 2 (LPA2) expression and clinical/pathological factor

LPA2 expression	Low (36)	High (48)	<i>P</i>
Age (years)			
<50	20 (56%)	16 (33%)	0.042
≥50	16 (44%)	32 (67%)	
Tumour size			
T1 (≤2.0 cm)	16 (44%)	17 (35%)	NS
T2 (>2.0 cm to ≤5.0 cm)	18 (50%)	25 (52%)	
T3 (>5.0 cm)	2 (6%)	6 (13%)	
Nuclear grade			
I	5 (14%)	5 (10%)	NS
II	24 (67%)	31 (65%)	
III	7 (19%)	12 (25%)	
Menopausal status			
Premenopausal	21 (58%)	17 (35%)	0.037
Postmenopausal	15 (42%)	31 (65%)	
Oestrogen receptor status			
Negative	10 (55%)	27 (56%)	NS
Positive	8 (45%)	21 (44%)	
Nodal metastasis			
Negative	12 (33%)	21 (44%)	NS
Positive	24 (67%)	27 (56%)	
Distant metastasis			
Negative	27 (75%)	41 (85%)	NS
Positive	9 (25%)	7 (15%)	

Numbers in parentheses indicate percentages in the same expression pattern. NS, not significant.
